                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to endothelial cell-specific molecule 4 (BCSM4), and the polynucleotide sequences encoding it. The ECSM4 proteins are useful for imaging vascular endothelium in the body of an individual, and for diagnosing and treating a proliferative disease or condition involving the vascular endothelium (preferably, necvasculature) such as cancer, psoriasis, diabetic retinopathy, the manufacture of diagnostic or prognostic agent for such conditions. The proteins are also useful for detecting endothelial damage or activation, detecting a tumour or tumour necvasculature, cardiac citation, detecting the amount of ECSM4 present in a sample. The polynucleotide sequences encoding ECSM4 are useful in gene therapy for treating a hypoxic condition such as cancer, cardiac disease, endometriosis or atherosclerosis and in the manufacture of medicaments for treating the above disease. The sequences are useful for medulating angigenesis in an individual. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           239

                                                                             ò
                                            Lull-length cDNAs defined in the specification. Where a primer sets comprises: (a) an oligo-dr primer and an oligonucleotide complementary comprises: (a) an oligo-dr primer and an oligonucleotide complementary strand of a polymucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 3'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to a polymucleotide which comprises a 3'-end sequence complementary to a polymucleotide which comprises a 3'-end sequence complementary to a polymucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in specification. The primers are useful for synthesialng polymucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also wseful for AHH1363 and AHH13631 to AAH13641 to AAH13632 to AAH13631 represent human amino acid sequences; and AAH13629 to AAH13631 represent invention

This claimed cDNA sequence, the coding region of which is also claimed, codes for novel human T85 (see AAM83927), also referred to claimed, codes for novel human T85 (see AAM83927), also referred to EMHB-6D4 and FWHB-SD4. The CDNA was identified in a human foetal brain cDNA library using a screen designed to identify genes caids and polypeptides of the invention are useful as modulating agents in regulating a variety of callular processes. They can be activity of the polypeptides (claimed). They can also be used in screening assays, detection assays (e.g. chromosomal mapping, tissue typing, foremsic biology), predictive medicine (e.g. tissue typing, foremsic biology), predictive medicine (e.g. diagnostic assays, monitoring clinical trials, and pharmacogenomics), and methods of treatment (e.g. therapeutic and prophylactic) e.g. for neurological disorders.
New isolated human FTHMA-070 and T85 proteins - used to develop products for the diagnosis and therapy of disorders involving cellular processes, e.g. neuronal development.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 4291 BP; 1154 A; 1011 C; 1045 G; 1081 T; 0 other;

The invention relates to a method for modulating the amount of Comm (Commissureless) polypeptide in contact with a cell expressing active Robo (roundabout) on its surface. The method comprises modulating the effective amount of comm polypeptide in contact with the cell, where the amount of expressed active Robo is specifically modulated inversely with the medulation of the effective amount of Comm in contact with the cell. The method is used to modulate the amount of active Robo expressed on a cell. The method can be used to screen for agents that modulate Robo:Comm interactions. This is particularly useful for modulating nerve cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            177

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1132, Application US/09016434
Patent No. 6500318
GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US-10-047-021-86_COPY_28_303 (1-276) x US-08-716-679-2 (1-5690)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          115 GlnProArgAspMetValAlaValValGlyGluGlnPhe----

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                         US-10-047-021-86_COPY_28_303
